DESIGN AUDIT & REDESIGN · ADSWORM

leevorá standee: what was wrong, and the fix.

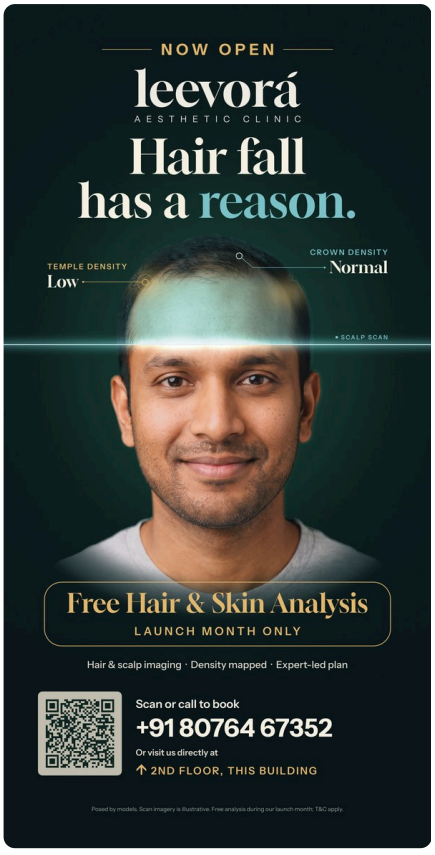

The original is clean but quiet. It works as a flyer, not as a street stopper. It has no hook, no night plan, a diluted offer and an AI photo with visible tells, and the print file isn't backlit-ready (85 ppi, RGB, no bleed). The redesign makes one idea readable from 10 m, and it reads just as strongly when the box is lit at night.

Before: original

After: Side A (skin)

After: Side B (hair)

PART 1

24 mistakes in the original

STOPPING POWER

01	No stopper. The hero is a woman in profile with her head inside a machine. There is no eye contact and no emotion, and from 8 m it reads as a white appliance. Faces looking at you stop people. Machines don't.	CRITICAL
02	Not planned for a backlit box. Lighter inks let more light through, and the biggest light area here is the cream CTA box at knee height. At night it turns into a glaring white slab, and the sage-grey headline glows weakly above it.	CRITICAL
03	No hook. "Complimentary Skin & hair analysis." is a label, not a reason to stop. It has no curiosity, no problem and no payoff.	CRITICAL
04	The offer is diluted. "Free" appears five times in five styles: Complimentary, the FREE pill, the Free 1 Month badge, "Book your free..." and the *Complimentary footnote. It reads as desperate rather than premium, and the eye can't tell which one is the offer.	CRITICAL
05	"For the first month" is vague. A passer-by doesn't know when you opened, so the deadline means nothing. Fixed: "Launch month only".	MAJOR
06	One audience on a two-faced unit. Only women and skin are shown, though the offer includes hair. Men's hair fall is one of the biggest clinic categories in Delhi, and the second face of the standee is wasted on a copy.	MAJOR

HIERARCHY & LAYOUT

07	Ten blocks compete for attention: NOW OPEN, logo, Complimentary, headline, pill, arch photo, badge, three features, CTA box and footnote. There is no single entry point.	CRITICAL
08	The circular badge text ("· HAIR · LIMITED PERIOD · SKIN ·") can't be read beyond 1 m. It is a template cliché and it collides with the arch.	MAJOR
09	The feature row is jargon. "8-Spectrum" and "17 Concerns precisely mapped" mean nothing to a passer-by, and the 7 mm sublabels can only be read within about 1 m.	MAJOR
10	The arch-frame photo is the 2023–24 Canva clinic look. It makes the piece feel template-built, and the client said this must not look generic.	MAJOR
11	The thin gold border sits about 33 mm from the edge. The frame lip (15–25 mm) will crop it unevenly, so it will look crooked in a light box, and its hairline weight disappears on flex.	MAJOR

COPY

12	Casing is inconsistent: "Skin & hair" has a capital S and a lower-case h, and the pill mixes caps sans ("FREE") with lower-case serif.	MINOR

13	The phone number is printed as an unbroken 10-digit block (8076467352). Indians chunk numbers 5-5, so set it as 80764 67352. That is easier to read, remember and dial.	MAJOR
14	No WhatsApp and no QR code. WhatsApp is the main booking channel in India and the only way to capture someone who won't cold-call. With no QR, you also can't measure what the standee brings in.	CRITICAL
15	The footnote has about 6 mm caps, so nobody can read it, and it repeats the offer a fifth time.	MINOR

"LOOKS AI-GENERATED" (THE CLIENT'S #1 CONCERN)

16	The button on the device reads "B33°". Gibberish text is the classic AI-image tell, and people spot it.	CRITICAL
17	The tablet UI is fake: the icons are nonsense, and the face on the screen is a different woman (frontal, blue-tinted) from the one being scanned (in profile).	CRITICAL
18	Her posture doesn't fit the device: her chin floats above the chin-rest. The plastic, unbranded machine and the generic "luxury clinic" blur add to the synthetic feel.	MAJOR
19	The photo is a screenshot of an older layout. The embedded image still contains the old arch ring, the green corners and half of the old "Free 1 MONTH" badge, which creates a risk of ghost edges.	MAJOR

PRINT PRODUCTION

20	Resolution: a 1254 × 1254 px photo is stretched to about 375 mm, which is 85 ppi. Backlighting shows pixelation and JPEG blocks because light passes through them. You need 150 ppi or more at 100%.	CRITICAL
21	The file is RGB (sRGB) with no CMYK build, so the deep green and the gold will shift unpredictably on Delhi RIPs, which often run unmanaged.	CRITICAL
22	There is no bleed (the page is exactly 24 × 48 in) and no safe area. Frames hide 15–25 mm and anything near the edge is at risk.	CRITICAL
23	The fonts are live, not outlined. CorelDRAW-based shops will substitute Gloock and Instrument Sans.	MAJOR
24	There is no backlit prep: no ink-density plan, no LED colour temperature, and nothing stopping the light areas from burning out.	MAJOR

Embedded photo: the old arch and badge are baked in

"B33°" gibberish and a different face on the screen

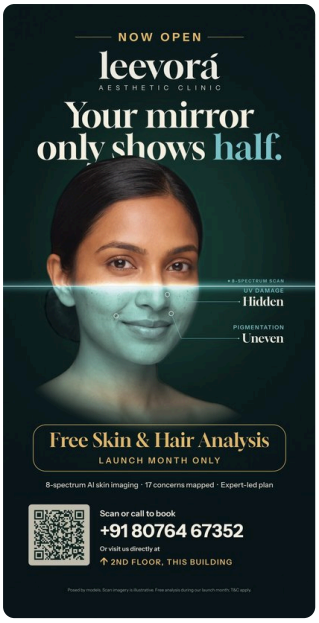

PART 2

What changed, and why it works

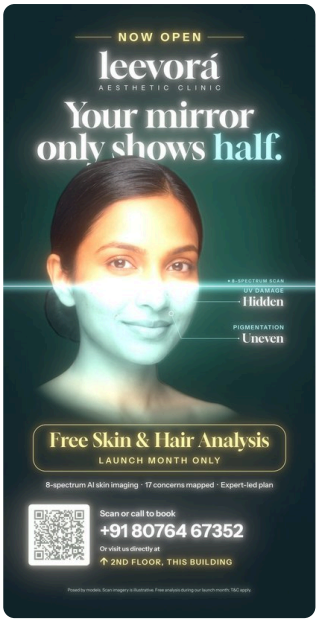

Stop from 10 m	A face at 1.5× life size makes direct eye contact, and a glowing scan line cuts across it. Below the line the skin is shown the way the clinic's machine sees it. That curiosity gap is the stopper.
One idea, one line	"Your mirror only shows half." pays off the picture in one look. Side B uses the man's own words: "Hair fall has a reason."
Built for a backlit box	The whole sheet is lit from behind, and lighter inks let more light through. So the picture is planned that way: the face, cream headline and gold offer are the lightest areas and read first, and the deep-green surround stays rich. Skin highlights are rolled off and the QR tile is warm grey, so nothing burns out into a white patch.
3D inside the picture	The depth is in the creative itself, with no add-ons. Side A's head sits in front of the headline, the beam throws light onto the skin above and below it, and the scanned half is lit differently from the natural half.
Two faces, two audiences	Side A is a woman and skin. Side B is a man and hair, with the scan above the line on the scalp and the thin temples flagged in gold. The offer word order flips ("Hair & Skin") so the first noun matches the face.
"Free" once, premium tone	One gold offer line: "Free Skin & Hair Analysis / LAUNCH MONTH ONLY". The proof line uses the clinic's own device wording: "8-spectrum AI skin imaging · 17 concerns mapped · Expert-led plan".
A measurable CTA	A 123 mm QR code (37 modules, 2.7 mm each) opens WhatsApp with a pre-filled message. The message says "skin" on Side A and "hair" on Side B, so staff can tell which face brought the lead. It was tested and decodes at full size and at phone-at-1.5 m scale. Below it: "Scan or call to book", one number (+91 80764 67352), then "Or visit us directly at ↑ 2ND FLOOR, THIS BUILDING".
Nothing synthetic to spot	No machines, screens, invented UI text, face meshes or template brackets. The UV view and the rings are computed from the photo's own skin, so the rings sit on real spots. Labels use words, not fake numbers, and the fine print says "Posed by models. Scan imagery is illustrative."
Print-grade files	CMYK FOGRA39 with TAC ≤ 300%, 150 ppi at 100%, 10 mm bleed, 40 mm safe area, outlined type, crop marks with TrimBox and BleedBox, a flex-wrap version and an sRGB master for RIPs with a media profile.

PART 3

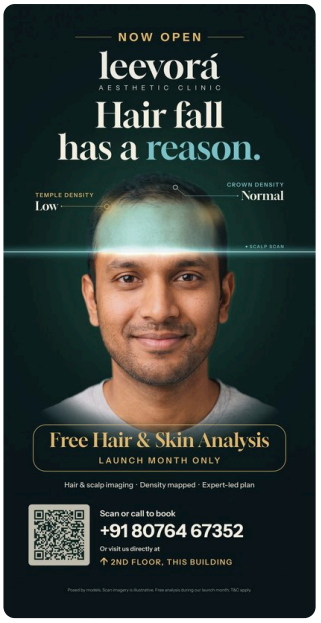

Day vs lit at night (backlit box, simulated)

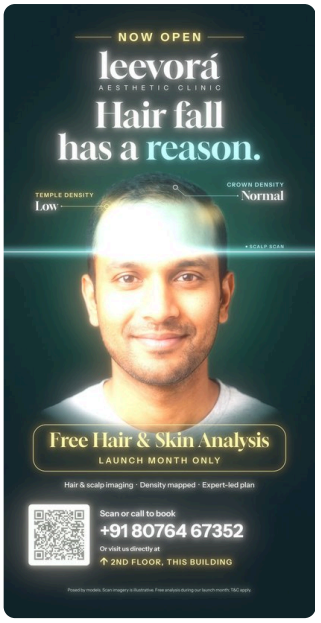

A · day

A · lit at night

B · day

B · lit at night

How it behaves lit. The whole sheet is lit from behind. Light inks let more light through, so the face, headline and gold offer read first and the deep green stays rich and dark around them. The QR tile is warm grey (C8 M8 Y20 K25), not white, so it doesn't flare, and skin highlights are rolled off so faces don't burn out.

PART 4

Confirm before printing

Value anchor	Add **"Worth ₹____"** under the offer. It is the strongest single upgrade to a "free" offer. I left it out because I won't print an invented price. Send me the real number and the change takes 2 minutes.
WhatsApp	The QR opens **wa.me/918076467352**. Confirm that this number is on WhatsApp (ideally WhatsApp Business with a greeting message) **before printing**.
Hair claim	Side B says "Hair & scalp imaging · Density mapped". Confirm that the hair analysis includes close-up scalp imaging. If it doesn't, I swap the line.
Exact dates	If the launch month has fixed dates, "TILL 30 NOV" beats "LAUNCH MONTH ONLY" for urgency. Send me the dates and I'll swap it.
Launch month	If you want to reuse the panel after launch, ask the vendor to print "LAUNCH MONTH ONLY" as a separate vinyl strip, so it can be peeled off later.
Which face faces the traffic	Side A (woman/skin) should face the direction most of the footfall comes from. If the unit stands side-on to the road, it doesn't matter.
Photos	Both portraits are photoreal generated models with no model release needed, and the fine print says "Scan imagery is illustrative". The best long-term upgrade is a real 30-minute shoot of your own clients or staff at your own scanner, which the engine can re-render the same day.
